

Figures

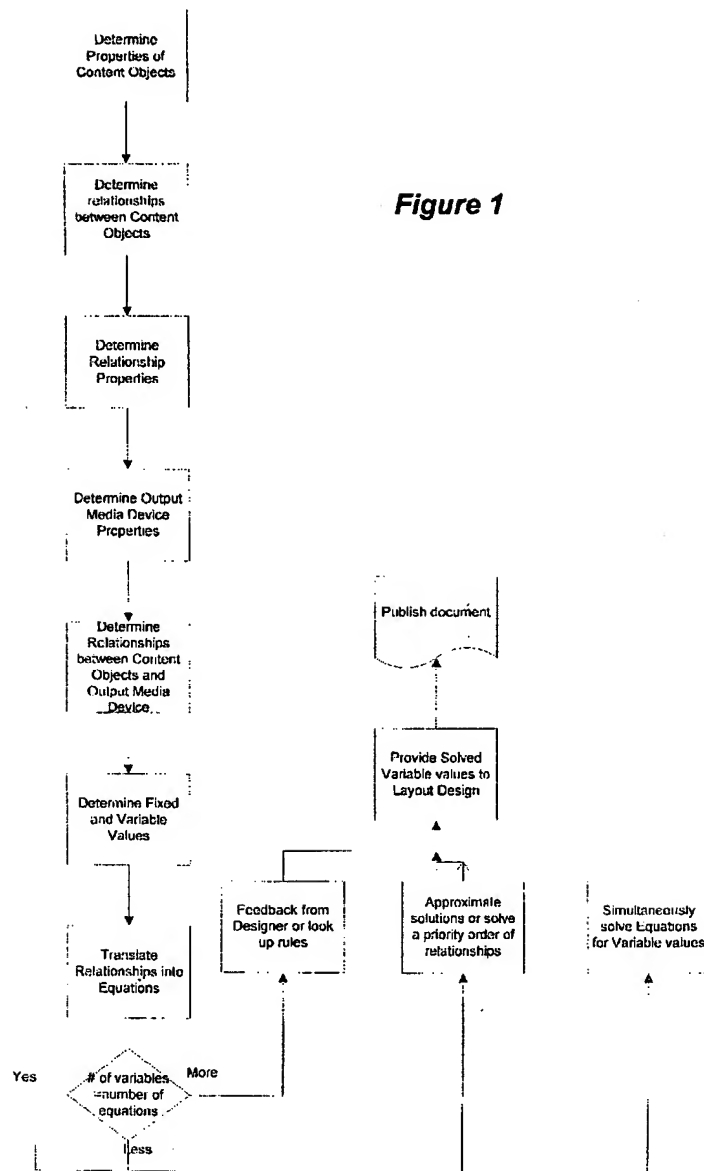

1. The first figure shows the results of the first experiment. The data indicates that the system is stable and the results are consistent with the theoretical predictions.

2. The second figure shows the results of the second experiment. The data indicates that the system is stable and the results are consistent with the theoretical predictions.

3. The third figure shows the results of the third experiment. The data indicates that the system is stable and the results are consistent with the theoretical predictions.

4. The fourth figure shows the results of the fourth experiment. The data indicates that the system is stable and the results are consistent with the theoretical predictions.

5. The fifth figure shows the results of the fifth experiment. The data indicates that the system is stable and the results are consistent with the theoretical predictions.
